Deployment manual

Eplouribousse

Collaborative webapp for managing serials deduplication in libraries

This guide is for deployers. User manual is also available (User_Documentation)

1. Specifications

- Language: Python 3.5.2
- Framework : Django 2.2.12 (LTS)
- Templates : HTML5 et CSS3
- No CMS
- Database : sqlite3 (eplouribousse.db)
- Use of send_mail() and get_host() methods
- Use of Reportlab for pdf edition

2. Deployment

For Django deployment issues see :

https://docs.djangoproject.com/fr/2.0/howto/deployment/

3. Current repositories :

https://github.com/GGre/eplouribounistra

or

https://git.unistra.fr/gressot/yellow

(They are the same ones)

4. Distribution :

Current repositories are done for a deployment with Pydiploy :

https://pypi.org/project/pydiploy/

Don't forget to adapt fabfile.py to your situation.

If you test *eplouribousse* with the development server, first don't forget the following command line before to run server :

export DJANGO_SETTINGS_MODULE=eplouribousse.settings.dev
